

An unnamed button, documented.

Run date: September 19, 2026 (UTC)

A short controlled demonstration of automated checking and reporting. This original local product card is not a Shopify integration, customer engagement or full paid report.

What this run returned

axe-core returned 1 violation instance under 1 distinct rule on 1 successfully checked page. No attempted page failed.

Incomplete checks: 0 rule/page records, containing 0 node records. These are unresolved tool checks, separate from violations.

Instances are returned violation nodes counted per rule per checked page. The same element can count under several rules or on several pages. Distinct rules are counted separately. These are not unique storefront problems or a legal-risk score.

Buttons must have discernible text

Component and state: Private original product card. Initial loaded page; no interactions performed.

What the tool observed: The tool found no discernible text or accessible name for the icon button.

Possible user impact: Some assistive-technology users may be unable to identify what the button does. This possible effect was not verified with a screen reader or a user.

Suggested investigation: Confirm the intended action, then inspect how its accessible name is provided. A developer can consider an appropriate name and evaluate the result with keyboard and assistive technology. No fix was implemented or verified in this demonstration.

What this does not establish

Only the initial loaded page state was checked. Interactions, keyboard operation, screen-reader use, mobile behavior, checkout, login flows and real user experience were not tested. No fix or subsequent recheck was performed.

Automated checks detect only some accessibility issues. A completed run, or no returned violations, does not establish accessibility, ADA compliance, WCAG certification or lawsuit protection. This report is not legal advice.

Developer details

For each rule on each page, the report shows up to three violation examples and up to three incomplete-check examples. Node counts include all returned nodes; the saved evidence retains the full returned results.

button-name - Private original product card

Category: violations. Returned nodes: 1. Axe impact label: critical. This label is not a business-priority assessment or legal-risk rating.

Example 1 of 1 returned node

Target: ["#item-information"]

Observed markup

```
<button id="item-information" type="button"><svg aria-hidden="true" focusable="false"
viewBox="0 0 24 24"><circle cx="12" cy="12" r="9"></circle><path d="M12 10v7M12
6v2"></path></svg></button>
```

Tool explanation (verbatim)

Fix any of the following:
Element does not have inner text that is visible to screen readers
aria-label attribute does not exist or is empty
aria-labelledby attribute does not exist, references elements that do not exist or
references elements that are empty
Element has no title attribute
Element does not have an implicit (wrapped) <label>
Element does not have an explicit <label>
Element's default semantics were not overridden with role="none" or role="presentation"

The tool lists alternative checks; this is not a list of changes to apply blindly.

Rule documentation: <https://dequeuniversity.com/rules/axe/4.13/button-name?application=axeAPI>

Coverage and method

Coverage record

Run status: completed-agreed-pages. 1 page attempted, 1 checked, 0 unchecked.

Private original product card

Requested URL: <http://127.0.0.1:64585/fixture>

Final observed URL: <http://127.0.0.1:64585/fixture>

Outcome: scanned; HTTP 200; requested state: initial loaded.

Failure: No page failure recorded.

Method record

Run began (UTC): 2026-09-19T18:54:57.822Z

Run ended (UTC): 2026-09-19T18:55:00.114Z

Requested page state: Initial loaded page; no interactions performed

Viewport: 1440 x 900 CSS pixels; desktop browser

Tools: axe-core 4.13.0; Playwright 1.63.0; Chromium/Chrome 153.0.8010.50; Node v24.19.0

Rule tags: wcag2a, wcag2aa, wcag21a, wcag21aa, best-practice

Timing: 500 ms settling after DOMContentLoaded; 15000 ms navigation timeout; 15000 ms axe timeout

Machine elapsed: 2291 ms

Human labor: Not measured. Machine elapsed time is not human labor.

The selected tags do not mean every requirement of those standards was tested. The fixture stayed outside the public website; the evidence above is a recorded result.

A customer engagement needs its own agreed URLs, deliverables, final price, timing and clarification arrangements. Read the methods and responsibilities at accessriskreport.com/methodology.html or contact ari@accessriskreport.com about scope.
